Summary

Analytical and results-oriented Database Administrator and Data Analyst with proven expertise in SQL Server, Python, Power BI, and Excel. Skilled in designing and optimizing databases, writing dynamic queries, and developing efficient ETL pipelines. Strong background in performing complex data analysis, building predictive models, and delivering clear visual insights through interactive dashboards and reports. Adept at transforming raw data into actionable information that drives informed decision-making and improves business performance.

Education

University of Swabi
CGPA: 3.51/4

Bachelor of Computer Science
Sep 2020 – Jul 2024

Glorious College of Science & Technology
Percentage: 79%

Pre-Engineering
Aug 2018 – May 2020

Experience

Database Administrator

ObsidianPM – Abbottabad, Pakistan
Dec 2024 – Present

- Optimized complex SQL queries, stored procedures, triggers, and views, reducing query time by 30%.
- Implemented MySQL InnoDB Cluster for disaster recovery and high availability (99.99% uptime readiness).
- Configured Master-to-Master and Client-to-Master replication for load balancing and performance testing.
- Automated database backups and maintenance using Bash scripts and Linux system time services.
- Designed and developed tables, schemas, triggers, and procedures to support application development and ensure data integrity.
- Collaborated with cross-functional teams to deliver robust database solutions on tight deadlines.

Data Science Intern

MeriSkill (Remote)
Jul 2024 – Oct 2024

- Analyzed sales trends and built interactive Power BI dashboards with slicers and filters.
- Developed a Python logistic regression model to predict diabetes and visualize key insights.
- Designed HR dashboards to track attrition, roles, and workforce demographics.
- Cleaned and transformed datasets, handling missing data to ensure reporting accuracy.

Data Analysis Intern

PlacementDost (Remote)
Feb 2024 – Apr 2024

- Designed SQL databases, stored procedures, and optimized queries for efficient reporting.
- Built an end-to-end pipeline combining SQL, Power BI, and Excel for analysis and visuals.
- Developed interactive Power BI dashboards with slicers, drill-downs, and geographic mapping.
- Analyzed and validated data in Excel using pivot tables, formatting, and advanced formulas.

Projects

Applicant Tracking System (ATS):

Built a Python [ATS](#) to extract candidate information from scanned or complex PDF resumes, rank them with smart scoring, and save results to Excel.

- Extracts basic information (name, contacts, skills, education) and calculates total experience from explicit mentions or by date range.
- Scores each resume on experience, skills match, education, and profile completeness with fully adjustable logic.
- Filters candidates based on Scoring, experience, education, or skills criteria.
- Saves all candidates and filtered lists to Excel and creates per-candidate logs for debugging.

Prediction Systems

Built Python machine learning apps to predict house prices and health risks, with user-friendly Streamlit interfaces for real-time results.

- [Predicted house prices](#) based on user input features using trained regression models.
- [Classified health risks](#) (e.g., heart disease, diabetes) using a decision tree model.
- Designed intuitive Streamlit front-ends for easy interaction and instant predictions.
- Ensured clean preprocessing pipelines for accurate, reliable outputs.

Data Analyses

Performed exploratory data analysis on diverse domains to uncover patterns, trends, and insights using Python and visualizations.

- Explored [Los Angeles crime](#) data to reveal trends by location, time, and victim demographics, using bar charts, pie charts, and heatmaps to highlight hotspots and crime status breakdowns.
- Investigated [hotel booking](#) data and [animated movie](#) trends to find drivers of cancellations and box office performance.
- Analyzed [UK fruit](#) and vegetable prices to detect seasonality and market risks.
- Used pandas, Matplotlib, Seaborn, and Plotly to communicate findings effectively.

Skills

Programming Languages:

Python, SQL, JavaScript, HTML/CSS

Database Management:

MySQL, MS SQL Server, Adminer, Replication, Backup & Recovery

Data Analytics & Visualization:

Power BI, Excel (Advanced Functions, Pivot Tables, Dashboards), ETL Pipelines, Report Automation

Libraries:

Pandas, NumPy, Matplotlib, Seaborn, Plotly,

Statistical & ML:

Probability, Hypothesis Testing, Linear Regression, Decision Trees, Supervised & Unsupervised Learning, Clustering, Dimensionality Reduction (PCA), Cross-Validation, Hyperparameter Tuning, Feature Engineering, Time Series Analysis

Version Control:

Git, GitHub

Frameworks & Tools:

VS Code, Streamlit, Jupyter Notebook, WordPress

Additional Skills:

Visual Storytelling, Report Writing, Effective Googling for Technical Solutions, Team Collaboration & Communication

Certifications

Python for Data Science, AI & Development – Coursera

Programming with Python – Coursera

What is Data Science – Coursera

Introduction to Software Project Management – Coursera

Meta Front-End Development Specialization – Coursera
